To Whom it May Concern

Our re: 21 / 11.01.2010

BLAST ENGINEERING Ltd. has been our painting contractor since 2004.

The main projects, we have completed with **BLAST ENGINEERING Ltd.**, as our painting contractor, are, as follows:

1. TPP "Maritsa East" 3 – Flue Gas Desulphurization Plant – 4000 tons of steel structures.
2. HOLCIM (BULGARIA) AD – Preheater Tower – 2500 tons of steel structures.
3. TPP "Maritsa East" 2 – Flue Gas Desulphurization Plant Units 1, 2, 3 & 4 – 3000 tons of steel structures.
4. HOLCIM (BULGARIA) AD – Roller Press Installation Tower – 1500 tons of steel structures
5. State Agency "State Reserves and Wartime Resources" – Project for Reconstruction of Existing and Construction of New Oil Products Storage Tanks.

The requirements for the anticorrosion protection of the structural steelwork for each of the above projects were very serious and a tremendous challenge for both companies.

For us the team of **BLAST ENGINEERING Ltd.** turned out to be the right and competent partner in anticorrosion protection of structural steelwork.

As a result of the joint activities of both companies and the internationally gained knowledge and experience in anticorrosion protection and coatings of Mr. Krassimir Bachovsky, solely owner of **BLAST ENGINEERING LTD.**, **MCE Ltd.** built and operates at its production premises in a painting shop for structural steelwork at the highest technological level.

Based on many years relationship with **BLAST ENGINEERING Ltd.**, we strongly recommend the company as a trustworthy supplier of anticorrosion protection services and a reliable partner in large scale and high responsibility industrial projects.

Dipl. Eng. Angel Christov
General Manager
